

Rail freight transport: Data Revision 2021 und 2022

In the area of transport statistics, data during the year is to be regarded as provisional until the results of a complete reporting year are available. With the publication of a reporting year, these values are considered as final. Should it be necessary to revise final data, this will be done in the form of a revision with marked data.

Referring to the survey on Rail freight transport, the data basis for the reporting years 2021 and 2022 had to be updated in October 2023 due to changed input data. For this reason, it was necessary to revise the results for the reporting years 2021 and 2022 that had previously been published as final. The revised data for both reporting years were published on October 27, 2023. In this context, it has to be noted that the revised values differ from those published before October 27, 2023 in press releases as well as on the Statistics Austria homepage and in the database STATcube. Revised values are marked as “revised”.

The deviations of the most important key figures from those published before October 27, 2023 are +1.5% for transport volume in the reporting year 2021 and +1.1% for 2022, as well as +0.9% for transport performance domestic in 2021 and +0.2% for 2022.
